                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2040
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1980
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1980
```

```
CC comprising administering a positive or negative regulator of cell-death CC inhibitory-factor. The invention also comprises a method for screening CC modulators of cell-death, by contacting cells expressing cell-death (CC inhibitory factor with a candidate compound, monitoring level of CC expression of cell-death inhibitory factor, evaluating cell-death (CC expression of the factor and selecting compounds having cell-death (CC expression of the factor and selecting compounds having cell-death (CC expression of the factor and selecting compounds having cell-death (CC expression of the invention may have (CC expression of the invention, antiinflammatory, cerebroprotective, anti-HIV, antificulties, cerebroprotective, anti-HIV, antificulties, cerebroprotective, patting the invention is useful for treating (CC phylotensive, antiarteriosclerotic, haemostatic, antialcoholic and (CC virucide activities. The method of the invention is useful for treating (CC HIV, cardiac diseases, immunological diseases, neurodegenerative disease, (CC ischaemic damage and congestion, disorder of central nervous system, (CC arteriosclerosis, reperfusion damage, myocardial infarction, cerebral trauma, cerebral infarction, cerebral haemograhage, hypertension, cerebral trauma, cerebral infarction, cerebral haemograhage, hypertensis, alcoholic hepatitis, and cerebral ischemia. The present sequence represents the DNA (CC invention.)

CC The invention relates to human nucleic acids (AAI57798-AAI61369) and the CC encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful CC in gene therapy. A composition containing a polypeptide or polypucleotide of the invention may be used to treat diseases of the peripheral nervous System, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's diseases, amyotrophic CC lateral sclerosis, and Syy-Drager Syndrome. Other uses include the CC utilisation of the activities such as: Immune system suppression, CC Activin/inhibin activity, cancer diagnosis and therapy, drug screening, CC and thrombolytic activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC C.N.S disorders. Note: The sequence data for this patent did not form correctly part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2077
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2017
```

The invention relates to human nucleic acids (encoded polypeptides (AAM38642-AAM42213) with

(AAI57798-AAI61369)

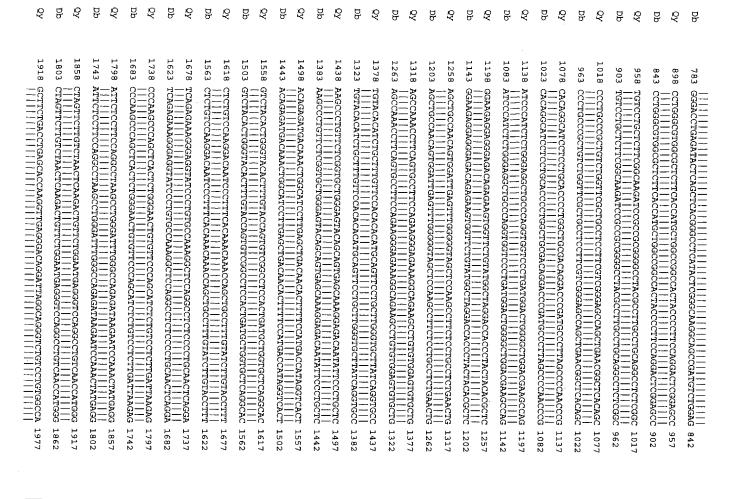

and

838

nootropic,

```
immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alaheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/Inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification

Novel isolated nucleic l for treating or acids comprising sequences diagnosing e.g. cancer. encoding peptides

Claim 1; Page 825-826; 2352pp; English.

antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antirheumatic; antiarthritic; tissues and cells the genes are expressed in. Example of activities AAB43398 to AABC78448 encode the human cancer associated proteins to AAB44239. The proteins can have activities based on t given μ'n

                                                                                                                                                                                                                    CC AAS06701-AAS06757 encode for novel human protein kinases #1-57. The novel CC protein kinases have been identified as members of the tyrosine or CC serine/threonine kinase (PTK and STK) families. The polynucleotides concoding protein kinases and the polypeptides may be used in the CC prevention, diagnosis and treatment of diseases associated with CC inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoietic origin), cardiovascular CC immune related diseases (e.g. theumatoid arthritis), neurological CC disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. chizophrenia), reurodegenerative disorders (e.g. chizophrenia), reurodegenerative disorders (e.g. chizophrenia), reurodegenerative assembly, infectious CC disease (e.g. HIV) and reproductive disorders (e.g. infertility). CC Additionally, polynucleotides encoding protein kinases may be used for CC gene therapy and as DNA probes in diagnostic assays. The protein kinase CC against the protein kinases and in assays to identify modulators of corofein kinase expressions and artiviev

The kinase polynuclectides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypeptides and fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinases play a central role in cellular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptide regulates, and proteins with which it might interact. The polypeptides may also be used for preparation of antibodies. The antibodies can be used in assays to detect the presence of the protein, and to purify the protein by immunoaffinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Kinase activity; molecular weight marker; isoelectric focusing marker; peptide fragmentation control; cellular signal transduction; ss.

                                                                                                                                                                                                                                                                                                                                                                                   The invention provides an isolated human tribbles homologue-1 (htrb-1, CR also known as stress kinase inhibitor protein (SKIP-1)) polypeptide. The christophylogoptide is useful for inhibiting an AP-1 mediated inflammatory (CR signal in a cell. The polypeptide employed in the method is preferably (CR attivation an ERK-mediated signal e.g. AP-1-mediated gene activation (CR activating an ERK-mediated signal e.g. AP-1-mediated gene activation (CR signal, an estrogen receptor-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an ecli. Hrrb modulators are useful for modulating AP-1 mediated confilammatory signal in a cell such as tumor necrosis factor (TNP) induced inflammatory signal in a cell such as tumor necrosis factor (TNP) induced (CR inflammatory signal in a cell such as tumor mecrosis factor (TNP) induced (CR inflammatory signal in a cell such as tumor mecrosis factor (TNP) induced (CR inflammatory signal in screening assays, predictive medicine and in (CR therapeutics or prophylactics. The htrb proteins are useful for screening assays, predictive medicine and in (CR therapeutics are useful for arthritis, diabetes, psoriasis, (CR thrb activity, such as rheumatoid arthritis, diabetes, psoriasis, (CR thrb activity, such as rheumatoid arthritis, diabetes, psoriasis, (CR the htrb therapeutics are useful for antagonizing interleukin-1 dependent (CR matter damage and subsequent cerebral palsy; and inflammation or (CR cutolimmune disorders. The present sequence represents a DNA encoding the other proteins are useful for proteins are useful for antagonizing interleukin-1 dependent (CR matter damage and subsequent cerebral palsy; and inflammation or (CR thrb-1 polyment dae

                                                                                                                                                                                                                                                                                                                                                                                              PKIN. The PKIN polypeptides can be expressed using standard recombinant methodology. The PKIN polypeptides, polynucleotides, modulators and specific antibodies are useful in the diagnosis, treatment and prevention of cancer, immune disorders, disorders affecting growth and development, atherosclerosis, and other cardiovascular diseases, and lipid disorders and in the assessment of the effects of exogenous compounds on the expression of nucleic acid sequences of human kinases. The present sequence represents a cDNA encoding a human PKIN-10 polypeptide

```
CC (NS) can have cytostatic, osteopathic, synaecological, neuroprotective, continheumatic, antiarthritic, antipsoriatic, ophthalmological, virucide, contropic, antiarteriosclerotic, antiinflammatory, dermatological, virucide, contropic, muscular, anti-HIV, antiinfercility, cardiovascular, continomological, anticoagglant, antiibrinolytic, hypotension, antiasthmatic, cardiant, continomological, anticoagglant, anticoagylant, cardiovascular, contropic and contraceptive activities. The NS can be used in vaccines, contropic and antisense therapy. Nucleic acids, expression vectors and contropic and antisense therapy. Nucleic acids, expression vectors and contropic and antisense therapy, nucleic acids, expression vectors and contropic and antisense collective, osteoporosis, endometricosis, degenerative contenses, dischaemia, rheumatoid arthritis, psoriasis, coagulation disease, ischaemia, hypertension, asthma, immune contenses, entense, entense, anciena neurodenseration disease arviery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile CC of a tissue or cell sample exposed to the compound, and comparing the CC gene expression profile to a database comprising SEQ ID 1-4925, where CC differential expression of the gene indicates at least one toxic effect. CC from method is useful for predicting at least one toxic effect of a compound, predicting hapatotoxicity or the progression of a toxic effect of a compound, identifying an agent that modulates the onset or CC progression of a toxic response, predicting the cellular pathways that a CC compound modulates in a cell, and identifying an agent that modulates at CC compound modulates in a cell, and identifying an agent that modulates at CC compound modulates in a cell, and identifying an agent that modulates at CC compound modulates in a cell, and identifying an agent that modulates at CC compound modulates in a cell, and identifying toxicity markers in CC least one activity of a protein. The method and compositions of the CC present invention using a database of genes having liver toxin-induced CC differential expression, are useful in identifying toxicity markers in CC sequence data for this patent did not form part of the printed consideration, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The method is useful for predicting or identifying at less one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2004 BP; 410 A; 563 C; 590 G; 441 T; 0 U; 0 Other;
